

Valentin Ostricov

Architect

Summary

Solution Architect and Mobile Architecture Lead with 15+ years of experience delivering complex digital products across fintech, payments, banking, trading, and travel. Strong track record of owning end-to-end solution design, defining target architectures, and guiding delivery through governance, risk management, and architectural quality attributes. Combines hands-on engineering depth in Mobile and cross-platform delivery with a pragmatic architecture mindset that connects business goals to executable technical roadmaps. Experienced in discovery/RFP work, technical audits, performance optimisation, and establishing observability and CI/CD standards to improve production readiness. Proven leader within Engineering and Architecture communities, contributing to capability development through mentoring, standards, reviews, and knowledge-sharing programs that support the growth of software engineers and strengthen delivery maturity across teams.

Recent projects

Projects within Endava

PSP integration with Amex Tokenization Service POC (12.2025 - 02.2026 / 2 months)

Domain / Industry: Payments

Role: Architect

Project Overview

This project is a Proof of Concept for integrating internal token/payment capabilities with the AmEx Tokenization Service using a modular, enterprise-ready architecture. It demonstrates how to connect external tokenization APIs while keeping core business logic independent from specific frameworks and providers.

Job Description

- Owned end-to-end solution architecture and target technical design.
- Produced architecture artifacts (LLD/ADRs/C4), module boundaries, and integration contracts.
- Supervised implementation to ensure architectural compliance across core, adapters, and application wiring.
- Defined non-functional guidelines (extensibility, separation of concerns, integration reliability, configuration/security baseline).
- Coordinated technical decisions with development teams and reviewed key design/implementation choices.

Tech Stack

Java, OpenAI Codex, Spring Framework, PlantUML

Mobile Trading and Investments app (11.2024 - 12.2025 / 1 year 1 month)

Domain / Industry: Banking & Capital Markets

Role: Developer Consultant

Project Overview

A comprehensive mobile trading platform aimed at both experienced traders and newcomers. It provides access to a wide range of financial markets including CFDs, forex, indices, shares, commodities, ETFs, crypto, and more

Job Description

- Technical audit: finding and resolving performance bottlenecks
- Requirements analysis
- Technical solution design
- Risks analysis
- Backlog breakdown and estimations
- Documenting solutions
- Code and design review

Tech Stack

Objective-C, Swift, Kotlin, Splunk, Figma, Confluence

API documentation Review (04.2024 - 05.2024 / 2 months)

Domain / Industry: Payments
Role: Development Consultant

Project Overview

The client engaged Endava to validate the completeness, usability, clarity and effectiveness of the Payment Provider Developer Portal documentation, compared to competitors. That expected output also included improvements roadmap.

Job Description

- Document collecting and analysis both for the client and its competitors
- Detailed evaluation against “API maturity framework”
- UI/UX assessment
- Compiling findings into recommendations
- Backlog breakdown and estimations

Tech Stack

Agile, Brainstorming

RFP & Discovery phase for Middle East state-owned transport company (06.2023 - 07.2023 / 2 months)

Domain / Industry: Growth MENA
Role: Development Consultant

Project Overview

A B2C solution that brings all of customer’s services under one roof through a mobile based automotive super app which offers consumers with a multitude of options such as getting a license, buying, selling, renting, leasing, servicing, and repairing their vehicles.

Job Description

- Owned technical discovery for a multi-service automotive “super app”; converting business vision into architecture options
- Estimating scope; decomposing backlog
- Leading risk analysis across mobile platform choices (native + React Native) and integrations.

Tech Stack

Charles Proxy, Postman

Access Management Application (Smart Locks) (04.2022 - 06.2022 / 3 months)

Domain / Industry: Other
Role: Development Consultant

Project Overview

A Mobile solution designed for managing hardware-based wireless locks. Using the app, administrators of facilities can define sites where the smart locks are located, commission the new locks, adjust their settings and configurations, manage user accounts etc.

Job Description

- Clarified requirements with stakeholders; audited a legacy Objective-C codebase
- Led refactoring of key modules; strengthened CI/CD practices
- Conducted systematic code reviews to ensure secure; reliable interaction between the app and hardware lock devices.

Tech Stack

Swift, Azure DevOps, Agile

Enterprise communication tool (04.2020 - 02.2022 / 1 year 11 months)

Domain / Industry: Technology

Role: Development Consultant

Project Overview

Cloud-based team collaboration platform providing secure video meetings, real-time messaging, and rich content collaboration, including file sharing and interactive whiteboarding. Designed for distributed organizations, it supports high-availability communication, scalable user adoption, and consistent experiences across desktop and mobile clients, enabling teams to meet, chat, share, and co-create effectively.

Job Description

- Partnered with UX and product to refine requirements; designed and implemented reusable iOS components
- Drove code quality through reviews; improved CI/CD and release hygiene for a cloud collaboration product spanning messaging and meetings.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack

C++, Swift, Objective-C, CI/CD (Continuous Integration / Continuous Delivery), Figma, Splunk, Jenkins

White label bank application (11.2019 - 03.2020 / 5 months)

Domain / Industry: Banking & Capital Markets

Role: Design Lead

Project Overview

White label bank application offers the possibility to manage accounts and cards. It includes OTP verification, PIN & biometric identification, transactions monitoring and transfers between cards/accounts.

Job Description

- Coordinating iOS and Android streams;
- Communication with Product Owner;
- Resolving dependencies with 3rd party vendors;
- Requirements clarification;
- Components design;
- Code review;
- CI/CD

Tech Stack

Swift, Agile

Serendipity framework (07.2018 - 09.2018 / 2 months)

Domain / Industry: TELCO & MEDIA_Legacy

Role: Development Consultant

Project Overview

iOS library meant to provide services around enabling mobile applications to deliver relevant, context aware content to mobile users. The framework analyses user's activities and environment in anonymous mode, then contextualizes and does prediction around media/consumptions opportunities.

Job Description

- Designed and developed core components of an iOS library for anonymous activity/environment analysis;
focused on clean API surfaces
- Modular architecture; maintainability
- While supporting CI/CD and performing peer reviews for SDK quality.

Tech Stack

C, Swift, Agile

Liquid: Mobile trading app (01.2018 - 07.2018 / 6 months)

Domain / Industry: Growth APAC

Role: Design Lead

Project Overview

Unified, globally-sourced trading platform that bridges the worlds of fiat and crypto. Liquid supports multiple fiat currencies, along with Bitcoin, Ethereum and dozens of digital assets. Liquid Mobile packs a powerful trading experience on one dashboard that can be seamlessly driven by simple swipe actions to quickly tap into the various features on Liquid's trading platform. Chart-centric dashboard allows tracking the fiat/crypto assets price changes in real time along with performing all types of trading operations. It is also equipped with the most demanded trade metrics and indicators like MACD, EMA, SMA, Ichimoku Cloud, Bollinger Bands etc.

Job Description

- Led iOS and Android streams; aligned roadmap with the Product Owner
- Drove requirements clarification; governed component design
- Code review; CI/CD for a chart-centric trading app with real-time data and advanced indicators.

Tech Stack

Agile

COPA Airlines, part 2 (12.2016 - 10.2017 / 10 months)

Domain / Industry: Travel

Role: Design Lead

Project Overview

Significant redesign of existing mobile app. Extended functionality with Trip History, sophisticated flight&trip alerts, electronic membership cards, improved loyalty dashboard, digitally signed boarding passes. Added integration with In-Flight-Entertainment Panasonic hardware equipment. Integration with TDL multi-tenant SaaS platform.

Job Description

Responsibilities

- Led iOS; Android
- Backend streams through a major redesign; managing dependencies
- Clarifying scope; guiding architecture for trip history; alerts; membership cards; integrations with multi-tenant SaaS and in-flight hardware SDKs.

Tech Stack

Agile

Loungekey - white label mobile app (09.2016 - 11.2016 / 2 months)

Domain / Industry: Travel

Role: Design Lead

Project Overview

White-label mobile app designed to help user finding nearest airport business lounges and notify about the most actual offers and promotions. The app was customized for few different brands and were able to support dynamic customization.

Job Description

- Designed and implemented iOS components for a white-label lounge locator, integrating location services, passes/cards where relevant, and brand customization
- Collaborated on requirements and reviewed code to keep delivery stable across variants.

Tech Stack*Swift, Agile*

SiklAir mobile app (04.2016 - 10.2016 / 6 months)

Domain / Industry: Travel

Role: Developer Lead

Project Overview

Mobile application created to enhance the end-to-end traveler experience, enabling users to manage trips directly from their device. Key capabilities include flight check-in, itinerary access, flight status updates, and loyalty account visibility (e.g., membership status and points). The solution also supports wearable interaction, allowing key travel information and actions to be surfaced on Apple Watch for quick, on-the-go access during the journey.

Job Description

- Acted as hands-on iOS lead, aligning with the Product Owner, clarifying requirements, implementing core modules, and steering code reviews
- Ensured smooth integration of Passbook features and Apple Watch support within a traveler experience app.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack*Agile*

COPA Airline, part 1 (02.2016 - 04.2016 / 3 months)

Domain / Industry: Travel

Role: Senior Developer

Project Overview

Mobile application designed to improve the overall traveler experience by enabling passengers to manage key journey activities from their phone. Core features include flight check-in, itinerary and flight details access, flight status monitoring, and visibility into loyalty program information such as membership status and points. The app aims to reduce friction at the airport and during travel by providing timely information, convenient self-service options, and a consistent, user-friendly experience throughout the trip.

Job Description

- Collaborated with the Product Owner to clarify initial scope
- Implemented key iOS components for flight check-in and traveler features
- Supported code quality practices and integration readiness for subsequent phases and enhancements.

Tech Stack

Agile

White label mobile utility payment app (05.2015 - 11.2015 / 7 months)

Domain / Industry: Payments

Role: Design Lead

Project Overview

Mobile application enabling users to manage prepaid energy usage through secure, convenient payments from their device. It supports topping up balances, viewing consumption-related information, and maintaining a clear record of transactions. The app securely stores payment card details (where permitted) and provides access to payment history for reconciliation and budgeting. Designed with strong security and reliability in mind, it reduces friction in repeat payments and improves transparency for users managing regular energy costs.

Job Description

- Led cross-platform delivery, managing client communication, refining requirements, and implementing core components
- Facilitated Scrum ceremonies, coached Agile practices, and governed code reviews for secure payment history and card management flows.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack

Agile

Cross-platform insurance mobile app (03.2015 - 09.2015 / 7 months)

Domain / Industry: Other

Role: Developer Lead

Project Overview

An automated travel recording system that allows personnel from subscribed organisations to document overseas travel details of any person covered under the organisation's Travel Insurance policy and produce instant insurance certification directly downloaded to mobile devices.

Job Description

- Led Agile delivery for a cross-platform insurance workflow app; coordinating requirements with the client
- Facilitating ceremonies; guiding implementation in a web/hybrid stack to ensure travel details capture and certificate generation aligned to policy rules.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack

Agile

iPad Client App - internal mobile project (09.2014 - 04.2015 / 7 months)

Domain / Industry: Technology

Role: Developer Lead

Project Overview

The scope of the project is to port existing Endava Web Site to iOS platform as an iPad app. The solution consists from a Proxy Backend (REST API) implemented in .NET and SiteCore as CMS using the latest tools a framework provided by Microsoft, and an iOS(iPad) App. The app supports offline mode, has lots of animations, dynamic UI, media and web content.

Job Description

- Led the iOS stream for an internal iPad app porting the Endava website; coordinating with proxy backend/CMS
- Building offline-first UX with rich animations; enforcing code review discipline to keep delivery predictable and maintainable.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack*Objective-C, Agile, Agile Scrum and Kanban, Jira, Agile Ceremonies*

SecureSign Proof Of Concept (12.2014 - 01.2015 / 2 months)

Domain / Industry: Other

Role: Senior Developer

Project Overview

Tablet application enabling users to sign PDF documents directly on-screen using a finger or stylus, providing a smooth and intuitive signing experience. It integrates a dedicated signature-capture SDK (MobSign) to record signature input accurately and attach it to the target document in a controlled, tamper-aware manner. The resulting signed PDF can be stored or shared while preserving the link between the captured signature and the document, supporting user identification and basic auditability for digital approval workflows

Job Description

- Worked closely with the Product Owner to shape requirements; implemented iPad workflows for capturing finger signatures on PDFs
- Integrated SDK components; ensured robust handling of document state
- Storage; user interactions.

Tech Stack*Objective-C, Agile Scrum and Kanban*

Zapp Mobile Payment framework (11.2013 - 08.2014 / 10 months)

Domain / Industry: Payments

Role: Developer Lead

Project Overview

Mobile payment framework designed to streamline the checkout journey from purchase intent to successful payment with minimal friction. It enables fast, secure payment initiation and confirmation

in a few steps, avoiding repeated credential setup and reducing the need to enter long card numbers or complex details. Built as a reusable integration layer for client applications, it supports consistent user experience, strong security controls, and scalable adoption across multiple merchants and banking/payment partners.

Job Description

Developed core Objective-C framework modules for a reusable payment SDK, integrating REST/JSON

services, Core Data patterns, and automated testing (BDD/unit/UI)

- Guided code reviews and build automation to support a robust delivery pipeline.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack

Agile Scrum and Kanban, Git, GitHub, Jira, Agile

Target Marketing System Mobile app (05.2013 - 11.2013 / 7 months)

Domain / Industry: Payments

Role: Developer Lead

Project Overview

A big mobile project consisting from several streams: web, API, iOS, Android. The business of the application is the target marketing. Cardholders provided with the target offers based on analytics and user preferences. The solution is a white-labelling app that branded by various member banks. The backend solution based on .NET and Sitecore, and mobile apps are native based. The mobile application is designed to support offline mode with lazy synchronization, white-labelling, integration with Google Maps and other Google APIs, SQLite caching.

Another specific part of the project is the development of an SDK that will allow easily in the future integrating visa offers to any new mobile applications.

Job Description

- Led the iOS stream within a multi-stream program (web/API/iOS/Android); making mobile technical decisions
- Implementing offline-first white-label architecture; coordinating with backend and mapping integrations while enforcing code quality controls.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack

Objective-C, Agile

Digital Concierge iPad demo app (10.2012 - 11.2012 / 2 months)

Domain / Industry: Payments

Role: Senior Developer

Project Overview

Proof-of-concept tablet application built to showcase a premium digital concierge experience for high-value customers, demonstrating modern mobile UX patterns and integration with a client's service ecosystem. The solution highlighted emerging technology trends, rapid prototyping capability, and the ability to orchestrate multiple backend services into a cohesive, high-end user journey suitable for personalised support and curated experiences.

Job Description

- Designed application architecture and implemented an Objective-C iPad POC to showcase service integration and modern UX patterns
- Ensured the solution clearly demonstrated value propositions and technical credibility for stakeholder review.

Tech Stack

Objective-C, Brainstorming

Trip Planner Mobile app (05.2012 - 09.2012 / 5 months)

Domain / Industry: Payments

Role: Developer Lead

Project Overview

The app allows you to create your own trips such as romantic weekends away, bachelorette parties; city breaks and provides you with editable packing lists, weather information, currency updates and destination guides so you can get the most out of your travels.

Job Description

- Defined architecture and UI design for a consumer travel planning app, implementing itinerary creation, editable packing lists, and integration with weather/currency services
- Guided delivery and code quality to meet App Store readiness.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack

Agile Scrum and Kanban

Be a Hero, iPhone application (12.2011 - 06.2012 / 6 months)

Domain / Industry: Retail & CPG

Role: Developer Lead

Project Overview

Cross-platform mobile application built to support staff, volunteers, and VIPs during London 2012 Olympic Games. It provided schedules for key events and venues, news updates, points of interest, internal chat, and operational features for distributing and assigning tasks to volunteers. The app focused on improving on-the-ground coordination and experience, while also enabling social sharing to amplify communication and engagement throughout the event.

Job Description

- Owned architecture and iOS implementation for an event support app used by staff/volunteers/VIPs, integrating social sharing and content flows
- Led delivery planning and quality practices to ensure stability during a high-visibility timeline.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack

Agile Scrum and Kanban

Camden Town, iOS app (11.2011 - 12.2011 / 2 months)

Domain / Industry: Media

Role: Developer Lead

Project Overview

The Camden Town is iPhone application designed to guide you around the streets of Camden and help you find exactly what you are looking for, the Camden Town App is the perfect companion for a trip to Camden. Works with geo location service, shows directions to the points of interest on the map, includes integration with Facebook and Twitter.

Job Description

- Designed the app architecture and delivered iOS implementation for a location-aware city guide, integrating maps, directions, points-of-interest browsing, and Facebook/Twitter sharing
- Ensured smooth navigation and reliable geo-services.

Tech Stack*Charles Proxy, CI/CD (Continuous Integration / Continuous Delivery), Cucumber***Boot shoot iPhone game (06.2011 - 08.2011 / 3 months)**

Domain / Industry: Other

Role: Developer Lead

Project Overview

The Boot Shoot is 3D mobile video game. Score points by flicking footballs into the open boot of a Hyundai ix35. As the game advances, additional points can be scored by targeting shots at the windows and doors of the ix35 driving around on the on-screen pitch.

Job Description

- Implemented multiplayer functionality and GameKit integration for a branded 3D football game, ensuring stable session management, scoring logic, and responsive gameplay
- Collaborated on delivery planning and quality to meet campaign timelines.

Tech Stack*C++, Objective-C, Agile Scrum and Kanban, Blender***iMockapp sketch tool (03.2011 - 06.2011 / 4 months)**

Domain / Industry: Other

Role: Developer Lead

Project Overview

The MockApp is the design tool intended for quick and easy UI Mock-up creation. Selecting needed controls and elements from Inventory the user can create a meaningful UI screen. Drag and drop a widget what you want to add to a screen. You can modify your UI by changing properties - colours, shape, text, images, and so on. The app allows sharing your UI design by email or exporting it in PDF file format to share it with your team members or customers.

Job Description

- Designed architecture and implemented an iPad tool for rapid UI mockup creation with drag-and-drop widgets, editable properties, and export/sharing options
- Ensured strong UX and maintainable code for iterative enhancement.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across

teams

Tech Stack *Agile Ceremonies*

Mobile Banking iOS Proof of Concept (12.2009 - 01.2010 / 2 months)

Domain / Industry: Banking & Capital Markets

Role: Developer

Project Overview

This project is a proof of concept of the mobile banking application. The user should have access to his bank account and possibility to perform set of defined operations on this account using his iPhone.

Job Description

- Created architecture and implemented an internal iOS POC demonstrating account access and a set of core banking operations
- Validated secure interaction patterns and ensured the prototype was clear, testable, and presentation-ready for stakeholders.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack *Adobe Photoshop*

Torture Harness Concurrent Testing Framework (08.2007 - 10.2009 / 2 years 2 months)

Domain / Industry: Payments

Role: Developer

Project Overview

Torture Harness is a Concurrent Unit Testing Framework. A System used in order to create and execute unit test against a public API of classes. This framework extended to support other more complicated testing needs (for example as a part of an integration test). In terms of the overall requirements, the Torture Harness should be easily configurable and support numerous testing scenarios across multiple processes and servers (minimal testing expected across servers). The system integrates with other software products such as Rational Purify, Quantify etc.

Job Description

- Developed a configurable concurrent unit testing framework in C++ for exercising public APIs, extending it for integration-style scenarios
- Integrated with IBM WebSphere MQ and tooling to support multi-process execution and repeatable test runs.

Tech Stack *C++, Bash, MantisBT, Apache Subversion (SVN)*

Projects with previous employers

B2B White-Label e-comm app for Global building materials manufacturing company (09.2018 - 08.2019 / 11 months)

Domain / Industry: Retail & CPG

Role: Design Lead

Project Overview

White-label e-commerce mobile application oriented to B2B customers. Interacts with Hybris SAP ERP via customized OCC public API. Allows end users to browse the products, add them to the cart, proceed with one of the selected fulfillment options. The solution can be easily customized for different brands.

Job Description

- Led iOS and Android streams for an enterprise B2B commerce solution; shaped mobile architecture
- Resolved dependencies with Hybris/SAP OCC APIs; guided backlog clarification with the PO
- Enforced quality via reviews and CI/CD automation.

Tech Stack

Agile

Hospitality mobile application (12.2015 - 02.2016 / 3 months)

Domain / Industry: Travel

Role: Scrum Master

Contract Type: Time & Material

Delivery Model: Agile - Scrum

Project Overview

The project opens a world of vacation exchange and travel opportunity to create a lifetime of memories. The project's feature allows users to search or browse resorts across the world. Users cannot only view resort information and amenities, but also, they can also view available resort videos and photos as well as easily compare multiple resorts at the same time. Further, they can save resorts into a local list and share resort information with friends

Job Description

Led Scrum ceremonies and Agile coaching while remaining hands-on in delivery, collaborating with the Product Owner on requirements and implementing Android features

Drove code review discipline and team alignment to maintain delivery focus.

Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across

teams

Tech Stack

Java, Objective-C, Agile Scrum and Kanban, Agile Ceremonies

FOX Business News iPad/iPhone App (11.2010 - 01.2011 / 3 months)

Domain / Industry: Media

Role: Design Lead

Project Overview

IPad application allows getting latest news, videos and market indexes from the FOX Business News. Gives the user possibility to create his own portfolio of the desired stock indexes and track their values using reminders, push notifications etc. The application also allows comparing different stocks. Another useful feature is that the application supports all screen orientations and has specific designs for portrait/landscape mode.

Job Description

- Developed architecture and iOS implementation for a financial news app with portfolios, market indexes, video feeds, reminders, and push notifications
- Ensured responsive UI across orientations and strong performance for real-time content.

- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack

Adobe Photoshop, Agile Scrum and Kanban

CSL Sofas Mobile Catalogue & Ordering App (04.2010 - 10.2010 / 6 months)

Domain / Industry: Retail & CPG

Role: Developer Lead

Project Overview

iPhone catalogue of furniture products. Allows browsing through the characteristics and benefits of each product. Provides possibility to make order, book a quote and perform payment using your credit card.

Job Description

Designed the app architecture and implemented iOS features for product browsing, ordering, quote booking,

and card payments

- Ensured clean navigation, reliable data handling, and readiness for iterative updates across two delivery phases.

- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across

teams

Tech Stack

Adobe Photoshop, Agile Ceremonies

ESPN GOALS Football App (06.2010 - 08.2010 / 3 months)

Domain / Industry: Media

Role: Developer Lead

Project Overview

iPhone schedule of the football matches. Gives you live scores, results, league tables and all the latest news from the top UK and European Leagues plus exclusive mobile access to clips from every Barclays Premier League match. Application is available on UK AppStore.

Job Description

- Architected and implemented an iOS app providing match schedules, live scores, results, tables, and news,

including media clips

- Ensured efficient updates, stable performance, and a user experience suitable for wide consumer adoption.

- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across

teams

Tech Stack

Adobe Photoshop, Agile Ceremonies

Evostik iPhone application (02.2010 - 03.2010 / 2 months)

Domain / Industry: Retail & CPG

Role: Senior Developer

Project Overview

iPhone catalogue of adhesive products. Use the interactive carousel in order to select two surfaces to bond and suitable adhesives returns in the results. Filter by trade, DIY or repair and browse the characteristics and benefits of each product. Provides 'find nearest stockist' function to give you the name, address and phone numbers of the stores closest to your current location. The locations of stockists can be shown on a map

Job Description

- Designed and built an interactive iOS catalogue with carousel-based surface selection, filters, and a “find nearest stockist” feature with map integration
- Ensured smooth UX and reliable geolocation across device conditions.
- Provided governance, stakeholder alignment, and delivery oversight to ensure a maintainable outcome across teams

Tech Stack

Adobe Photoshop

Dental Manager Cross-Platform Desktop Application (11.2006 - 07.2007 / 9 months)

Domain / Industry: Healthcare & Life Sciences

Role: Developer

Project Overview

Cross-platform client-server application, giving users ability to share the same patient records, supporting immediate records update, instant messaging between clients. Client program development using wxWidgets, server was purely console application. Using asynchronous sockets removed the necessity in multithreading, so the server's stability was increased.

Job Description

- Designed project architecture and C++ implementation using QT
- Created asynchronous socket-based server communication to avoid heavy multithreading
- Established unit tests and design practices to sustain quality across the codebase.

Tech Stack

C++, Boost, Ubuntu, Qt

OrthoManager Medical Imaging & Analysis (11.2006 - 07.2007 / 8 months)

Domain / Industry: Healthcare & Life Sciences

Role: Developer

Project Overview

Cross-platform medical GUI application, designed to organize, keep and process x-ray patient images and patient related data. Qt 3 library used for GUI layer. Functionalities: storing patient information, image processing (rotation, change brightness, etc), performing cephalometric analysis, showing and printing reports.

Job Description

Developed cross-platform Qt-based medical GUI application to manage X-ray images and patient data; implementing image processing (rotate/brightness)

- Cephalometric analysis; reporting/printing workflows with strong attention to usability.

Tech Stack

Ubuntu

Smart Integrated Metering System (Smart IMS) (12.2003 - 10.2006 / 2 years 10 months)

Domain / Industry: Energy

Role: Developer

Project Overview

Up-to-date automated system the purpose of which is for remote metering of different resources consumption, such as electrical energy, water, gas, heat, as well as for the consumption processes management.

Job Description

- Built low-level components for remote metering; including power-line communication protocol work (C/C++/Assembler)
- Embedded software for MSP430x and AVR microcontrollers; end-to-end testing to validate reliability across diverse devices.

Tech Stack*C/C++, Assembly language, Eclipse IDE*
